

“DO A DOUBLE TAKE”

“In late-2004, Garrett Electronics introduced two new models which shook the entire industry by offering features and performance at a price tag \$100’s less than the competition. I had the opportunity to test the *Ace 150* a few months back and this field test report covers the *Ace 250* which is the “bigger brother” of the *Ace 150* offering even more features with just a slightly higher price tag...

“The new *Ace 250* is a detector that has stunned many treasure hunters around the world with the performance and features it offers at a bargain-basement price—even those with years of experience using detectors costing far more than what the *Ace 250* sells for. As described in this field test, I recovered a number of coins that were at depths I would equate to those obtained from a \$700+ detector on a consistent basis. The best way to sum up the *Ace 250* is “a fun, simple detector that provides surprising detection depth without any complicated adjustments!” Many people I’ve spoken to said they initially bought the *Ace 250* as a backup detector or gift for a youngster only to find that they wound up using it more and more themselves. The performance it provides for less than \$250 will make you do a double take!”
