

“VERY ACCURATE IDENTIFICATION”

“The first thing I noticed after assembling the *GTX 550* was its comfortable balance...The Target ID and Depth measuring portion of the display is divided into 24 segments, allowing for very accurate identification and depth readouts in 1/2” increments down to 12”. The display also reports battery condition, mode of operation, and discrimination settings...

“The *GTX 550*, although a mid-priced detector, has many features found only on top-of-the-line detectors, making it a good choice for the novice as well as the experienced detectorist.”
