

“MORE COINS, LESS TRASH”

“A unique feature of the *GTP 1350* is that it provides target sizing or profiling with ANY search coil unlike the GTI series which requires special Imaging coils to provide that information. Not only does this save money when purchasing additional coils but it allows you to use any GTA coil you may have such as the Crossfire II or DD coils while providing profiling data via the LCD screen...

“After spending some time in my test garden getting used to the GTP’s response to known targets & operations of the Profiling circuitry, I visited a few local schools and parks to see how it performed in the field. Combining the notch discrimination feature along with the visual target ID, depth & target size indications, I recovered close to 100 coins with virtually none of the trash typically found at these types of sites...

“The new *GTP 1350* offers treasure hunters an easy-to-use detector with features not found on any other detector in its price range. Garrett has always instructed his engineering staff to provide performance while keeping the detector SIMPLE to operate and the GTP is no exception. All of the adjustments can be made with a minimal number of keystrokes and no complicated programming is required to obtain maximum in-field performance.”
