

“INCREDIBLY USEFUL FOR PROSPECTING”

“This hand-held device which operates at 12 kHz is incredibly easy to use and completely takes the guess work out of pinpointing. It features One-Touch operation with 360° detection along the entire shaft and tip. It incorporates both audible and vibrating alarms, which increase based on the target’s proximity...

“After visiting several sites in Arizona, I found that the *Pro-Pointer* could not only find gold, but it could find incredibly tiny gold. In fact, one of the match head-size pieces I located weighed a mere 0.2 grams! As I had hoped, it proved incredibly useful for prospecting, especially when working narrow bedrock cracks and crevices. Unlike a standard search coil, the slender tip of the *Pro-Pointer* easily fit into these tight spaces and allowed targets, even multiple targets, to be pinpointed in a matter of seconds.

“Some of the features I liked best were the ease of use, audio and vibration response, water-proof design, and versatility...

“Any metal detectorist that would like to speed up their recovery time, greatly reduce the chance of target damage, and save themselves the hassle of unnecessary digging will most definitely want to give this product careful consideration.”
